

Post-Call Drift Rank

Transcript-language evidence across post-call equity observations.

Executive Summary

This note summarizes historical rank evidence for Post-Call Drift Rank. Metrics are reported as research diagnostics under the source-run assumptions and should be read as evidence about ranking behavior, not as a live recommendation.

Preferred horizon	63d
Top-bottom spread	1.08%
Rank IC	0.023
Long-leg return	n/a
Average turnover	n/a

- 1. The preferred diagnostic horizon is 63d, where the recorded rank spread is 1.08%.
- 2. Spread evidence is strongest around the 63d horizon in the available comparison set.
- 3. Rank IC is positive in the reported research run at 0.023.

Data and Research Setup

UNIVERSE

Liquid listed equities with dated text or event observations in the source run.

INPUTS

Daily close prices combined with timestamped text, event or transcript features.

CADENCE

Event-aware or monthly cross-sectional ranking review, depending on the source panel.

COMPARISON BASIS

Comparisons use the same universe and source assumptions inside each run. The note omits current constituents, current tickers and live recommendations.

The source files were used for historical research extraction only. This note does not disclose current constituents, current ranks or position-level recommendations.

Signal Methodology

Without disclosing the exact functional, the construction proceeds along three conceptual steps.

1. **Signal measurement.** Measures a dated event or text signal that can be aligned to later returns.
2. **Cross-sectional ranking.** Ranks observations by the intensity or direction of that event signal.
3. **Horizon evaluation.** Evaluates whether the ordering carries information beyond the immediate observation window.

The description is intentionally conceptual. Formula details, exact construction rules and implementation parameters are not disclosed.

Results and Horizon Context

Figure 1. Top-minus-bottom spread by tested horizon from the available validation summary. The chart is a diagnostic comparison, not a standalone portfolio NAV.

Horizon	Rank spread	Rank IC	Long-leg return	Turnover
21d	0.41%	n/a	n/a	n/a
42d	0.57%	n/a	n/a	n/a
63d	1.08%	n/a	n/a	n/a

Stability and Robustness

Figure 3. Rank-IC evidence across the available horizon set. Where only one horizon is available, the chart should be read as a compact evidence marker.

The available horizon evidence is coherent enough for a research note.

Positive-year fraction	n/a
Universe size	2,147
Validation dates	4,268

Research Interpretation

ROLE IN RESEARCH LIBRARY

Machine-learning ranking component inside the research library.

WHAT IT CAPTURES

Nonlinear interaction evidence between the source feature set and subsequent cross-sectional returns.

KNOWN LIMITATIONS

Model evidence depends on the training window, feature availability and replay assumptions. It is not a live trading specification.

The evidence supports retaining the signal in the research library where it can be compared with related components under the same assumptions.

Historical research output. Not investment advice. Not a live recommendation.
