

State-Space Trend Rank

State-space trend evidence across a broad liquid equity universe.

Executive Summary

This note summarizes historical rank evidence for State-Space Trend Rank. Metrics are reported as research diagnostics under the source-run assumptions and should be read as evidence about ranking behavior, not as a live recommendation.

Preferred horizon	252d
Top-bottom spread	5.58%
Rank IC	0.046
Long-leg return	17.64%
Average turnover	45.15%

1. The preferred diagnostic horizon is 252d, where the recorded rank spread is 5.58%.
2. Spread evidence is strongest around the 252d horizon in the available comparison set.
3. Rank IC is positive in the reported research run at 0.046.

Data and Research Setup

UNIVERSE

Broad liquid equity universe used by the source research run.

INPUTS

Daily close prices and dated feature panels available at the research observation date.

CADENCE

Cross-sectional rank review at the reported horizon set.

COMPARISON BASIS

Comparisons use the same universe and source assumptions inside each run. The note omits current constituents, current tickers and live recommendations.

The source files were used for historical research extraction only. This note does not disclose current constituents, current ranks or position-level recommendations.

Signal Methodology

Without disclosing the exact functional, the construction proceeds along three conceptual steps.

1. **Signal measurement.** Measures persistence in relative price or exposure behavior over the research horizon.
2. **Cross-sectional ranking.** Ranks instruments cross-sectionally so stronger persistence can be compared with weaker persistence.
3. **Horizon evaluation.** Evaluates whether the medium-horizon ordering is coherent across adjacent horizons and sample splits.

The description is intentionally conceptual. Formula details, exact construction rules and implementation parameters are not disclosed.

Results and Horizon Context

Figure 1. Top-minus-bottom spread by tested horizon from the available validation summary. The chart is a diagnostic comparison, not a standalone portfolio NAV.

Horizon	Rank spread	Rank IC	Long-leg return	Turnover
21d	0.25%	0.002	1.22%	45.15%
63d	0.68%	0.023	4.20%	45.15%
126d	2.87%	0.042	8.20%	45.15%
252d	5.58%	0.046	17.64%	45.15%

Stability and Robustness

Figure 3. Rank-IC evidence across the available horizon set. Where only one horizon is available, the chart should be read as a compact evidence marker.

The available horizon evidence is coherent enough for a research note. Positive-year fraction is 69.3% in the source run.

Positive-year fraction	69.3%
Universe size	1,851
Validation dates	77

Research Interpretation

ROLE IN RESEARCH LIBRARY

State-space secondary ranking component inside the research library.

WHAT IT CAPTURES

Persistent latent trend-state information under the source-run assumptions.

KNOWN LIMITATIONS

State estimates depend on the sample window, feature availability and replay assumptions. This is not a live trading specification.

The evidence supports retaining the signal in the research library where it can be compared with related components under the same assumptions.

Historical research output. Not investment advice. Not a live recommendation.
