

Volume-Confirmed Bollinger Reversion Rank

Bollinger reversion evidence across the stated research universe.

Guerrieri Capital Ltd
guerriericapital.com

Bollinger Reversion | Secondary research | 63d preferred horizon

Executive Summary

This note summarizes historical rank evidence for Volume-Confirmed Bollinger Reversion Rank. Metrics are reported as research diagnostics under the source-run assumptions and should be read as evidence about ranking behavior, not as a live recommendation.

Preferred horizon	63d
Top-bottom spread	2.08%
Rank IC	0.078
Long-leg return	4.40%
Average turnover	86.08%

- 1. The preferred diagnostic horizon is 63d, where the recorded rank spread is 2.08%.
- 2. Spread evidence is strongest around the 63d horizon in the available comparison set.
- 3. Rank IC is positive in the reported research run at 0.078.

Data and Research Setup

UNIVERSE

Broad liquid equity universe used by the source research run.

INPUTS

Daily close prices and dated feature panels available at the research observation date.

CADENCE

Cross-sectional rank review at the reported horizon set.

COMPARISON BASIS

Comparisons use the same universe and source assumptions inside each run. The note omits current constituents, current tickers and live recommendations.

The source files were used for historical research extraction only. This note does not disclose current constituents, current ranks or position-level recommendations.

Signal Methodology

Without disclosing the exact functional, the construction proceeds along three conceptual steps.

1. **Signal measurement.** Measures relative extension or residual dislocation in the source universe.
2. **Cross-sectional ranking.** Ranks observations by the degree of overextension after applying the source-run controls.
3. **Horizon evaluation.** Evaluates whether subsequent return differences are directionally consistent across horizons.

The description is intentionally conceptual. Formula details, exact construction rules and implementation parameters are not disclosed.

Results and Horizon Context

Figure 1. Top-minus-bottom spread by tested horizon from the available validation summary. The chart is a diagnostic comparison, not a standalone portfolio NAV.

Horizon	Rank spread	Rank IC	Long-leg return	Turnover
5d	0.54%	0.081	0.43%	86.08%
21d	1.39%	0.091	0.93%	86.08%
63d	2.08%	0.078	4.40%	86.08%

Stability and Robustness

Figure 3. Rank-IC evidence across the available horizon set. Where only one horizon is available, the chart should be read as a compact evidence marker.

The available horizon evidence is coherent enough for a research note.

Positive-year fraction	n/a
Universe size	3,000
Validation dates	99

Research Interpretation

ROLE IN RESEARCH LIBRARY

Cross-sectional research-library ranking component.

WHAT IT CAPTURES

Relative characteristic information under the source-run assumptions.

KNOWN LIMITATIONS

The note reports historical research diagnostics, not a standalone live strategy.

The evidence supports retaining the signal in the research library where it can be compared with related components under the same assumptions.

Historical research output. Not investment advice. Not a live recommendation.
