

Dual Thrust Breakout Rank

Breakout evidence across broad listed equities.

FAMILY Support/resistance breakout	UNIVERSE Broad listed-equity research panel	RESEARCH HORIZON 1d
--	---	---

Executive Summary

Dual Thrust Breakout Rank is evaluated as secondary research note retained for comparison. The preferred 1d row shows a 0.12% rank spread and a 0.001 rank IC.

Preferred horizon	1d
1d rank spread	0.12%
Rank IC	0.001
Long-leg return	0.39%
Average turnover	not estimated

Observations

1. Ranking evidence is strongest at the selected 1d research horizon.
2. The horizon profile should be read as historical ranking evidence, not a current allocation instruction.
3. The signal is best interpreted as secondary research note retained for comparison.

Data and Research Setup

The setup evaluates price-action ranks on a consistent broad listed-equity panel and forward horizon grid.

UNIVERSE

Broad listed-equity research panel; current holdings and issuer-level rank tables are not shown.

INPUTS

Daily price fields are used under a common panel construction. Formula recipes and current rank tables are excluded.

COMPARISON BASIS

The same universe, date grid and horizon definitions are used across the displayed rows.

OUTPUT BOUNDARY

The figures are historical diagnostics. They do not present current positions or instrument rankings.

Signal Methodology

Without disclosing the exact functional, the construction proceeds along three conceptual steps.

STEP 1

Signal evidence

The construction maps the source idea into a cross-sectional ranking signal.

STEP 2

Cross-sectional ranking

Instruments are compared against peers within the research panel at each observation date.

STEP 3

Forward evaluation

Ranked groups are compared over a fixed forward horizon to measure top-minus-bottom spread.

The description is intentionally conceptual. Formula details, exact construction rules and implementation parameters are not disclosed.

Results and Horizon Context

Figure 1. Cumulative 1d top-minus-bottom rank-spread contribution, normalised to zero at the first valid research observation. Long-horizon forward observations overlap, so the series should be read as a ranking diagnostic, not as a standalone return path.

Figure 2. Top-minus-bottom spread across tested horizons under the same comparison setup.

Horizon	Rank spread	Rank IC	Long-leg return	Turnover
1d	0.12%	0.001	0.39%	not estimated
5d	0.16%	-0.006	0.87%	not estimated
10d	0.27%	-0.005	1.20%	not estimated
21d	0.27%	-0.029	1.84%	not estimated
63d	1.46%	-0.029	5.64%	not estimated
126d	2.66%	-0.024	11.36%	not estimated
252d	6.65%	-0.025	25.37%	not estimated

Stability and Robustness

Stability is assessed from horizon shape and the yearly profile of the preferred-row spread.

Figure 3. Yearly average 1d rank-spread contribution for the preferred horizon.

Year	Average spread
2016	0.17%
2017	-0.19%
2018	0.18%
2019	0.36%
2020	0.06%
2021	-0.17%
2022	0.24%
2023	0.26%
2024	0.78%
2025	-0.33%
2026	-0.20%

Horizon evidence is coherent when neighbouring rows have the same sign and similar magnitude.

Research Interpretation

The signal is grouped with related price-action families for comparison against established references.

ROLE

Secondary research note retained for comparison.

CAPTURES

Relative ranking evidence linked to the source economic lens.

USE

Comparison component inside broader systematic allocation research.

LIMITATIONS

The note does not disclose construction details, issuer-level ranks, execution assumptions or product suitability.
